

The European Observatory EQEO Project

By Jean Roussel and Michel Van Droogenbroek (WP 5)

Forum Meeting 4, 11 June 2013, DG ENTR, Brussels

11 June 2013

Presentation

- EQEO: Eco technologies Quality European Observatory
- The EQEO is a pilot database making extensive information on some eco technologies available on a European level

Objectives

- To promote the quality of eco-technologies used in the construction sector
- To support insurers in their risk assessment and, consequently, to facilitate the access to insurance, especially for SMEs

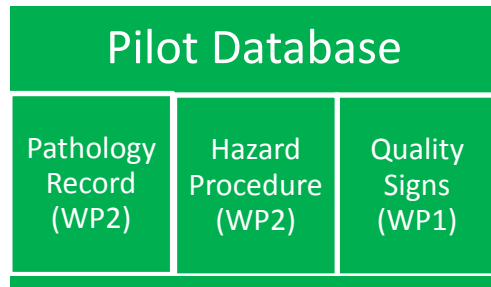

Three functions

- Overview of the pathology recorded
- Hazard notification procedure
- State of the art of the specific quality signs

Organisation

Based on a contractual agreement, the EQEO will gather key national actors holding some records or databases about quality and pathology for their local markets and interested in this approach and in pooling information

EQEO Test phase (2014)
